

Educational work completed by Feb 28:

- I have never done any Python programming, so I wanted to begin learning this with my Java “background”.
- Completed CodingBat problems → Warm up 1, 2 questions from String 1, Logic 1
 - <https://codingbat.com/python>
- Began reading through the pertinent sections of a Python how to guide:
 - <https://www.w3schools.com/python/>
 - Intro, Strings, data numbers, casting, loops completed so far
- Planning to continue with these processes and cherry pick sections to allow me to complete my portions of the projects.

Learning how to build a virtual environment (Feb 29):

- With limited background in database design etc, I wanted to review this lightly to understand what was going on.
- My group member → Jared Waldroff was helpful in posting some items to help understand how we were going to build our virtual environment using Flask, Bootstrap, and PyMongo.
- I reviewed these and am working on installing these on my device this evening. Should be completed by Friday Morning.
